[Fortsetzung auf der nächsten Seite]

(54) Title: QUICK-ACTION COUPLING CYLINDER COMPRISING A GUIDING DEVICE FOR THE FEED NIPPLE

(54) Bezeichnung: SCHNELLSPANNZYLINDER MIT FÜHRUNGSEINRICHTUNG FÜR DEN EINZUGSNIPPEL

400 % LONGER CATCH COURSE COMPARED TO STANDARD NIPPLES

400% mehr Fangweg gegenüber Standardnippel

(57) Abstract: The invention relates to a quick-action coupling cylinder (1) comprising a guiding device for the controlled introduction of a feed nipple (2) fixed to the lower side of a workpiece palette, into the central receiving opening in the housing of the quick-action coupling cylinder. The aim of the invention is to ensure that the feed nipple is inserted into the central receiving opening in the housing without any damage. To this end, the front side of the feed nipple comprises conical bevels (17) which are inclined towards the rear in the insertion direction, said bevels interacting with a corresponding conical recess (18), inclined in the opposite direction, in the housing of the quick-action coupling cylinder.

(57) Zusammenfassung: Die Erfindung beschreibt einen Schnellspannzylinder (1) mit Führungseinrichtung für die gesteuerte Einführung eines an der Unterseite einer

Werkstückpalette befestigten Einzugsnippels (2) in die zentrale Aufnahmeöffnung im Gehäuse des Schnellspannzylinders. Um ein beschädigungsfreies Einfahren des Einzugsnippels in die zentrale Aufnahme im Gehäuse zu gewährleisten, sieht die Erfindung vor, dass die Stirnseite des Einzugsnippels in Einführrichtung nach hinten abgeschrägte Konusschrägen (17) aufweist, die mit einer zugeordneten - entgegengesetzt geschrägten - Konusaufnahme (18) im Gehäuse des Schnellspannzylinders zusammenwirken.

☒ Further documents are listed in the continuation of box C.☒ Patent family members are listed in annex.

* Special categories of cited documents:

"A" document defining the general state of the art which is not considered to be of particular relevance

"E" earlier document but published on or after the international filing date

"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

"O" document referring to an oral disclosure, use, exhibition or other means

"P" document published prior to the international filing date but later than the priority date claimed

"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.

"&" document member of the same patent family

INTERNATIONAL SEARCH REPORT

International application No.
PCT/EP2004/003945

Box I Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)

This international search report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☐ Claims Nos.:
because they relate to subject matter not required to be searched by this Authority, namely:

2. ☐ Claims Nos.:
because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out; specifically:

3. ☐ Claims Nos.:
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

Box II Observations where unity of invention is lacking (Continuation of item 2 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

see supplemental sheet

1. ☐ As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.
2. ☐ As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3. ☐ As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:

4. ☒ No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

1-13, 16-18

Remark on Protest

- ☐ The additional search fees were accompanied by the applicant's protest.
☐ No protest accompanied the payment of additional search fees.

further information

PCT/ISA/ 210

The International Searching Authority has determined that this international application contains multiple (groups of) inventions, namely

1. Claims 1-13, 16-18

quick-action clamping cylinder according to the preamble of claim 1, wherein the front face of the insertion nipple has conical bevels that cooperate with a corresponding – oppositely beveled - conical seat or coned point in the housing of the quick-action clamping cylinder.

Problem solved: centering correspondence between the insertion nipple and the housing of the quick-action clamping cylinder.

2. Claims 14-15

quick-action clamping cylinder according to the preamble of claim 1, wherein a catch device for mechanical coupling of the insertion nipple with a reciprocating piston disposed inside the quick-action clamping cylinder is arranged between the insertion nipple and the reciprocating piston.

Problem solved: the quick-action clamping cylinder securely catches the insertion nipple.

3. Claims 19-22

quick-action clamping cylinder with a spring-loaded ball locking mechanism for a machine shaft that engages through the housing of the quick-action clamping cylinder.

Problem solved: high-precision positioning and fixation of a machine shaft.
